Trade Fair REPORT

19-20.10.2022
EXPO Krakow

13th International Trade Fair
for Powder & Bulk Solids Technologies

13th International Trade Fair
for Suppliers of Maintenance
Products and Services

13th International Fair for Powder & Bulk Solids Technologies SYMAS® and the 13th International Fair for Suppliers of Maintenance Products & Services - MAINTENANCE which took place 19-20 October made International Exhibition and Convention Centre EXPO Krakow a host for numerous representatives from various industries.

The numbers speak for themselves, this year's edition showed that the industry is thirsty for face-to-face meetings - allowing to establish new or consolidate existing contacts.

The combination of the trade fair exhibition with a broad and substantive program allowed to respond to the pressing needs of industrialists who are looking for new technologies and expertise on how to successfully implement such technologies in their own plant.

MEETINGS ON A GRAND SCALE.

VISITORS

The organizers of the SYMAS®/MAINTENANCE Trade Fair take great care of the high quality of the event, so with the information about the fair they reach out to specific people - those who are genuinely interested in expanding their business contacts. Positive feedback from exhibitors proves that this goal has been achieved. Every year, the fair is visited by representatives of almost every industry, including: electromechanical, metallurgical, chemical, food, mining or fuel and energy industries.

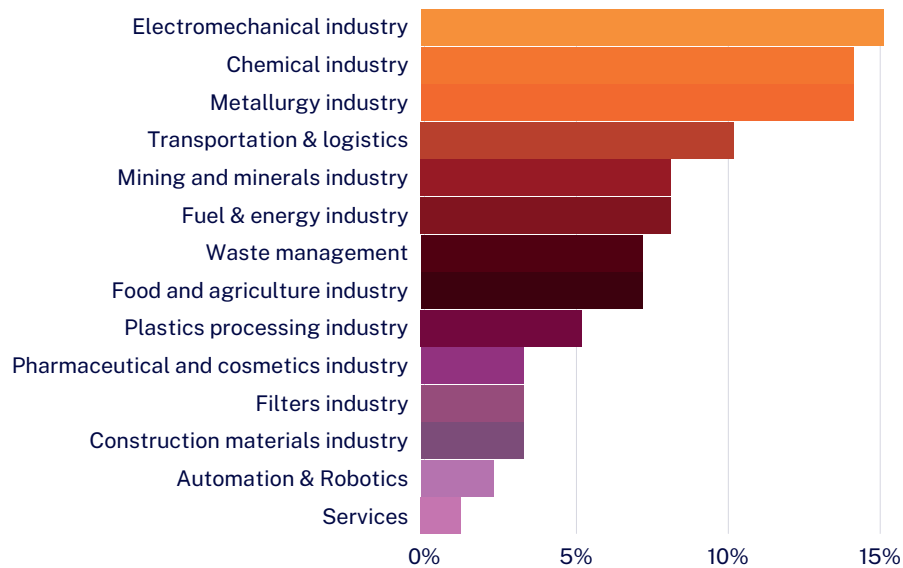

Positions

The greatest value of the fair is, first of all, the possibility of personal contact with a large number of customers within one space. In the normal course of business, we are able to meet with one, two, maybe three customers per day, at the same time, we are not always able to deal with them comprehensively. Here, on the other hand, we have the opportunity to meet and exchange experiences with many participants in one place. The second thing is that here we are able to present our capabilities in a tangible way, in the form of equipment that function at test stands - they give an idea of what we can do and what we can offer to our customers. The trade fair has a lot of advantages.

This is our first time at the SYMAS® Trade Fair in Krakow and I am very impressed with the scale of the meetings that are taking place here. It's been a few hours, and we've already made a number of new contacts with potential customers, so I hope this will bring great benefits to our company.

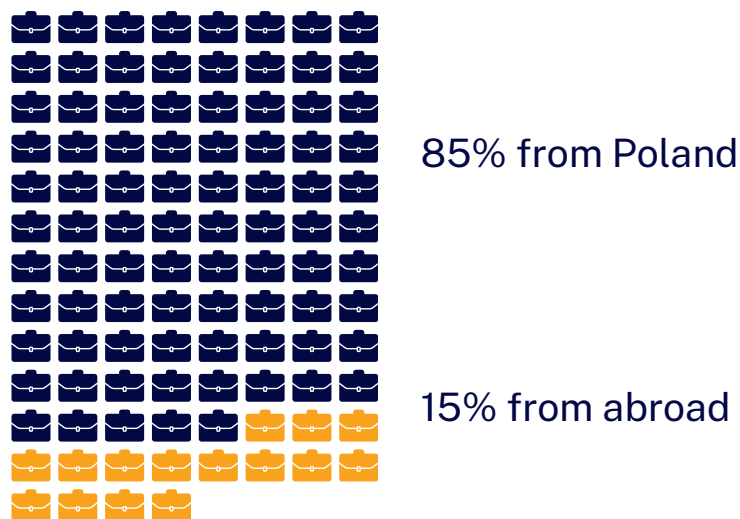

Daniel Gawron from Eurotronic

EXHIBITORS

The SYMAS® and MAINTENANCE Trade Fair have consistently built their brand over the years among companies with solutions or services for processing, handling, transportation and storage of bulk and solids materials, as well as among those offering tools and technologies dedicated to the maintenance and production optimization of industrial plants.

The event's strength and competitive advantage lies in responding quickly and effectively to industry needs. Here we are talking about the most current topics, i.e. staffing problems at workplaces, rising energy prices or the use of artificial intelligence. At the fair, experienced professionals share their knowledge and experience, suggesting solutions that are antidotes to a wide range of problems.

Everything starts with knowledge

The fair is not only an exhibition, but also an extensive accompanying program. During the fair we organize the Autumn Maintenance School - a two-day conference where the most interesting case studies are discussed. Participation in the meetings is an opportunity to expand your knowledge of good engineering practices used in European industry. Each edition arouses interest of many representatives from Polish industrial plants not only because of the high content value of the lectures, but also due to the possibility of using the learned content in everyday work.

This year's conference focused on three most current topics:

- Maintenance methods and tools - covering optimal maintenance strategies in the context of Industry 4.0. solutions;
- Risk & crisis management in industrial plants;
- energy efficiency - important in the context of soaring prices for energy and energy utilities.

Exhibitors appreciate the opportunity to speak at expert workshops, where they can present to a wide range of visitors with numerous case-studies and the results achieved by their customers through the use of modern technological solutions in industrial plants.

ACCOMPANYING PROGRAM

We are seeing a lot of interest. Many customers have asked very in detail about our solutions, about the possibility of using them in installations. We have also noticed a great response after our presentation - customers who attended the presentation are coming to us.

SYMAS[®] **MAINTENANCE**

SYMAS[®] & MAINTENANCE Trade Fair

In thirteen years, it has become a key event for the industry. Not without significance is the fact that the event is held in Krakow - a city that is one of the most attractive business travel destinations. Numerous air connections to Balice and the proximity to the Czech Republic and Slovakia make the fair eagerly visited by foreign clients.
